RE: AT&T MA3415
Request for Determination of Minor Modification
Premises: 244 Worcester Street, Grafton, MA

Dear Chairman and Members of the Planning Board:

This letter is respectfully submitted on behalf of AT&T in connection with the above referenced application.

AT&T respectfully requests a determination of minor modification in order to modify its existing wireless communications facility on the building located at 244 Worcester Street in the Town of Grafton (the "Premises").

AT&T currently has nine (9) antennas located at an antenna centerline height of 104' above ground level on the existing 110' building. AT&T also has associated radio equipment facade-mounted to the backside of the penthouse, and radio equipment cabinets located on an existing steel platform on the roof.

AT&T proposes to replace three (3) existing antennas with three (3) new antennas, replace (3) existing RRH's, install three (3) new RRH's, and install two (2) surge arrestors. The RRH's and surge arrestors will be mounted on existing unistrut on the backside of the penthouse. *Please note that there will be no expansion of AT&T's existing equipment pad.*

In support of this request for a determination of minor modification, I have attached drawings prepared by B+T Group dated 10/11/18. I have also attached a structural opinion letter prepared by B+T Group dated 12/28/18, which confirms that the existing roof structure can safely support the existing and proposed equipment.

Thank you for your consideration in this matter. Please call me with any questions or concerns.

Sincerely,

Eric Dahl
Agent for AT&T
